To develop and test computer software for warehouse management and control systems based on the Logistex Warehouse System products – LWS Reflex and Analytex. To always work in accordance with the Risk

Assessment, Safe System of Work or Work Place risk Assessment as provided by Logistex

Role details:

• Develop software as per the system and module design documentation produced for projects, adhering to SOLID principles.

- Use agreed company standards so that work can be easily understood, checked, and maintained by others.
- Carry out unit testing to ensure that the software performs as per the design and according to company standards (with respect to screen layouts, behaviour etc.).
- Develop software within the time specified, or provide early feedback where this is not possible.
- Use experience gained on previous projects and in previous companies to challenge design where there is a more appropriate solution. Use the agreed change control mechanism to do so
- Use the issue logging system (currently Jira) to report upon faults in core package software.
- Use the company development tools and computer systems provided for your role
- Provide support to the client/commissioning team during early life
- Assist with software build deliveries to test and site environments
- Follow Company Health and Safety procedures and responsibilities as outlined in the Health & Safety Policy as per section:
- 3.9 Company Employees
